

QUINCYTECH

Advancing Forensic Information Management

CASE MANAGEMENT - Medical Examiners - Coroners - Law Enforcement - EMS - Mortuary Affairs - Homeland Security - Mass Disasters - Association Management - and more - LABORATORY MANAGENET - Toxicology - DNA Biology - Trace Evidence - Waste Water - and more

To All Medico-legal Professionals

Many medico-legal investigative agencies are looking to automate their agency caseload but the lack of funding and/or ongoing in-house IT support have prevented the purchase of software and hardware to implement a state-of-the-art case management system. Furthermore, the medico-legal community is being encouraged to share and communicate information real-time to improve the critical role we play in public health and bio-terrorism surveillance. With QUINCYTECH's technologically advanced CASEManager_{fw} (CMfw) and the Internet, it is now very cost effective and quick to implement a case management system for any medical examiner or coroner office, no matter the size or number of staff.

QUINCYTECH is offering free half day seminars on Introduction to Electronic Death Investigation at different locations around the county. This informative program will include information on how to make the transition to electronic death investigation, the cost and staff resources to implement, and the benefits and value of data management. QUINCYTECH's experienced medico-legal investigative IT staff will be on-hand to share more about making the move to electronic death investigation using CASEManager_{fw} (CMfw) via an Application Server Provider (ASP) model.

QUINCYTECH is a leader in supplying forensic science technologies, and is the only vendor that offers and has successfully operated an ASP hosting software service to Medical Examiners and Coroners Offices.

In today's environment where natural disasters and homeland security are ongoing concerns the medico-legal community, more than ever, should collect and share their data for real-time public health surveillance. Utilizing CMfw via the Internet or Intranet enables any agency to securely collect, automate, and communicate mission critical data during all aspects of an investigation or mass disaster.

CMFW ASP COST

AGENCY SIZE	Set Up, Hosting & First Year ASP Fee	Yearly ASP Fee
1-5 Users	\$6,500	\$5,000
6-10 users	\$14,500	\$7,500
11-25 users	\$25,000	\$18,000
26-40	\$43,000	\$32,250

You can manage your caseload with the same advanced medico-legal death investigative software system used by many of the largest well funded offices in the county. Signing up to use the **CASEManager_{fw}** ASP network saves you time and money, avoiding large up-front capital expenditures for hardware and software. Users of **CASEManager_{fw}** ASP also benefit from the functionality of this comprehensive software application without having to hire on-staff information technology specialists.

With QUINCYTECH's ASP model, both the application and your data are hosted on state of the art servers that are managed and maintained daily by QUINCYTECH engineers and Via Net data center staff. This eliminates the expense of having to purchase and maintain the required hardware and software to use the application. The ASP model allows any computer with a standard IE 6.0 browser and an Internet connection to securely access the **CASEManager_{fw}** application that has been installed and configured specifically for your agency.

Other Benefits of the ASP Model Include:

- **Accessible 24 X 7 Anywhere in the World**
A **CASEManager_{fw}** user has access to their critical and decision support information 24 hours a day, 7 days a week from anywhere in the world where Internet connectivity is available.
- **Low entry and fixed yearly or monthly pricing**
Pricing for the **CASEManager_{fw}** is a low yearly or monthly charge per user site, with a one-time start-up fee. Rather than incurring large up-front expenditures for hardware, software and implementation; users of QUINCYTECH's ASP **CASEManager_{fw}** pay a predictable yearly or monthly fee to help maximize cash flow.
- **Automatic System Upgrades**
QUINCYTECH continually upgrades the functionality and capabilities of **CASEManager_{fw}** ASP applications. QUINCYTECH performs the system upgrades at its data center with a method that prevents service interruptions. Users can access the increased functionality and capabilities immediately at no additional cost. This is in contrast to non-ASP system upgrades, where users have to pay for the software upgrade and the onsite implementation, which may cause disruptions to the practice and system downtime.
- **Service and Support**
Ongoing service and 24 x 7 technical support are included in the start-up and low user fees.
- **User friendly with minimal user training**
Medico-legal staff can begin using the system immediately with the support and training from QUINCYTECH staff. Simple, intuitive screens allow easy navigation through the application making the transition from paper to computer as seamless as possible.
- **Integration with existing office management products**
CASEManager_{fw} applications easily integrate with a wide variety of existing software used to manage reports: MS word, excel, PDF, and more.
- **Security of data**
QUINCYTECH's ASP model ensures data security — an area crucial to the forensic science service provider and also mandated by **HIPAA**.
- **Data Sharing Data Warehousing**
CASEManager_{fw} also provides the ability to securely, and in real-time, export critical data to other state and local systems, i.e., death certificate data, CPSC data, cremation authorization, etc.
- **Minimal computer requirements**
Any standard computer running Microsoft Internet Explorer 6.0 or above are able to use **CASEManager_{fw}**. In addition to our applications investigative, collaborative, and data sharing expertise, QUINCYTECH offers its ASP customers the advantage of its extensive Internet and network connectivity expertise, gained by establishing and successfully managing the first and only Medical Examiner and Coroner application service provider (ASP) network. As a result, all the critical areas such as communications, data collection and management, information sharing, document management, and networking can be handled through QUINCYTECH's ASP services providing a total package for our user.
